

Preparing Your Workspace For Post-COVID

Just as health and safety were prime considerations for sending your employees home, their well-being must be kept top-of-mind when planning their return to the office.

Taking steps to ensure your workspace is safe, sanitary and virus-free before and after your employees return to the office will give them peace of mind and show that you are an employer who genuinely cares about their well-being.

Keeping your employees safe and in-the-know

If your workspace has been re-configured to accommodate social distancing, directions for using the office space together with other communications, such as an FAQ and safety guidelines should be made available. Communicate the importance of proper hand-washing and provide touch-free hand sanitizers for all your employees.

Cleaning vs. Disinfecting

While it's important to wipe down keyboards, mice, phones and other high-touch items in the office with cleaning solutions and wipes, **there is a big difference between cleaning and disinfecting.**

Maintaining a safe and sanitary workplace – that's where we come in

Viruses can live on any type of surface. Unlike manual cleaning methods, disinfectant fogging delivers a thorough and deep disinfectant that kills 99.99% of bacteria, germs and viruses

including COVID on every surface in your office. Our fogging application is non-toxic and safe for all surfaces, including electronics.

An initial fogging application will render your workspace virus-free. Our maintenance packages will help you keep your workspace safe and clean.

Connect with us on [Facebook](#) or visit [our website](#) and discover how easy it is to have your workspace "Sanitized by Fog".
